

# 1 Navigation

## 1.1 File System

### 1.2 ls

1. looks at the directory you are in
2. lists all the files and directories inside of it

### 1.3 pwd

1. stands for “print working directory.”
2. prints the path of directory you are currently in
3. Together `ls`, the `pwd` are useful to show where you are in the filesystem.

### 1.4 cd

1. stands for “change directory.”
2. switches you into the directory you specify.

#### Example

```
cd 2015
```

- 2015 is called argument
