

1 Build a Back-End with Node/Express.js

1.1 Introduction

1.2 Node REPL

- Is an abbreviation for Read-eval-print loop
- Node comes with built-in javascript REPL
- `.editor` goes into editor mode
 - Use CTRL + D when ready to evaluate the input
- A REPL can be extremely useful for performing calculations
- The Node environment contains a number of Node-specific `global` elements in addition to those built into the JavaScript language
 - can be examined using command `console.log(global)`
